

I am an over-the-road truck driver and use satellite radio "INSTANT TRAFFIC & WEATHER" reports everyday in order to deliver loads of medical equipment to pharmaceuticals that are critical to HealthCare providers in the United States. Being able to listen to these reports is one of the greatest tools I have on-board my truck. It allows me to avoid congested areas, relieves the congested situation of one less big truck, and ensures the time-sensitive delivery is there when it needs to be. Trying to listen or even find a local radio station that can give instant traffic reports is a joke. I can spend up to 45 minutes of listening to advertisements and loud shock jocks before I get the information I need. To ban the broadcast of "Instant Traffic & Weather Reports" from my XM receiver would truly be an injustice to me and the american people. Remember: WITHOUT TRUCKS. . . AMERICA STOPS.
